TECHNICAL FEATURES:	compliant with the EN 14411/L Bill GL standards
INTENDED USE:	wall coverings for residential interiors

PRESS RELEASE

Gardenia discovers the splendour of Swarovski crystal

The Gardenia Orchidea Ceramics Group presents Onice, an exclusive project that expresses a new concept of domestic space, involving a unique relationship between light and matter.

In an increasingly time-obsessed, standardised world, where intimacy and originality are in short supply, we tend to lose sight of beauty.

Onice defeats this trend by taking us on a journey through the times and places of pleasure, with the right combination of intimacy and splendour; a moment of luxury in the ceaseless search for a balance between soul and body.

The collection's key features are the exclusive workmanship and the accent on details, and it is intended as Gardenia Orchidea's latest response to the growing demand for choice materials for contemporary living.

Swarovski crystals are the real novelty in this product: Gardenia Orchidea has obtained a world-wide patent for the ceramics sector covering the insertion of the crystals directly into the ceramic slab.

Each tile can therefore contain up to 10,800 original Swarovski holohedric crystals, giving rooms a sparkle never previously achieved, with reflections constantly changing in response to the light conditions.

The new mosaics are another company exclusive: each tile (19x49 cm) is engraved with special cutting blades to subdivide the surface into 360 dots; each individual dot is then given a different angle, to underline the iridescent properties of the surface and the choice finishing raw materials used.

Onice's already numerous installation combinations are further extended by the unusual decorative accents, produced internally by skilled craftsman with precious metals including gold and platinum, and lustre and metallic surfaces.

The collection uses high-resolution digital printing, currently the most accurate, sophisticated technique capable of creating colour variation effects that make every piece unique and unrepeatable.

Using this same technique, the Gardenia Group has become the first and only firm in the sector to create open-edged compositions of several pieces with graphic designs that form a single, seamless motif, allowing the reproduction of effects typical of natural materials. What's more, the floor tiles' exclusive stain-resistant honed finish allows the creation of surfaces with a watery effect with staining-protection over time and during installation.

Double-fired wall tiles, available in 6 colour variants, for combination with the porcelain floor tiles with natural and honed surface (9 colour variants).

Onice is the key to the interpretation of domestic luxury: small touches of excess, details that count to give rooms the style of those who live in them.
